

Business Analytics Dashboard (Excel)

Project Overview

The **Business Analytics Dashboard** is an interactive Excel-based Business Intelligence solution designed to monitor and analyze business performance across sales, revenue, profit, customer segments, products, and regions. The dashboard transforms raw business data into meaningful insights through KPIs, Pivot Tables, Pivot Charts, and Slicers, enabling data-driven decision-making.

Objectives

- Analyze overall business performance.
 - Monitor revenue, profit, and profit margin.
 - Identify top-performing products.
 - Compare regional sales performance.
 - Analyze customer segments.
 - Monitor monthly revenue trends.
 - Support strategic business decisions.
-

Dashboard Features

Key Performance Indicators (KPIs)

- **Net Revenue:** ₹138,060,684.23
- **Total Profit:** ₹41,532,136
- **Average Profit Margin:** 39.29%

Interactive Filters (Slicers)

Users can dynamically filter dashboard data by:

- Product Category
 - Product Name
-

Visualizations Included

1. Sales by Product Category

Displays sales contribution across:

- Apparel
- Cosmetics
- Electronics
- Food
- Furniture
- Sports

2. Profit Margin by Category

Compares profit margin for each product category.

3. Region by Revenue

Displays revenue contribution from:

- North
- South
- East
- West
- Central

4. Monthly Revenue Trend

Shows monthly revenue performance throughout the year.

5. Customer Segment Revenue Share

Displays revenue distribution among:

- Enterprise
- Retail
- Online
- Wholesale
- SMB

6. Top 10 Products by Revenue

Highlights the highest revenue-generating products.

7. Top Sales Representatives by Revenue

Shows the highest-performing sales representatives based on revenue generated.

Tools & Technologies Used

- Microsoft Excel
 - Pivot Tables
 - Pivot Charts
 - Slicers
 - Conditional Formatting
 - Data Cleaning
 - Data Validation
 - Dashboard Design Techniques
-

Dataset Information

The dataset contains business-related information including:

- Order ID
 - Customer ID
 - Customer Name
 - Product Name
 - Product Category
 - Sales Representative
 - Revenue
 - Profit
 - Profit Margin
 - Quantity
 - Discount
 - Region
 - State
 - Customer Segment
 - Order Date
-

Key Insights

- Apparel contributes the highest revenue.
 - The West region generates the highest profit.
 - Online customers contribute significantly to revenue.
 - Monthly revenue shows seasonal business trends.
 - Top sales representatives generate a major share of revenue.
 - Profit margin varies across product categories.
-

How to Use

1. Download the Excel dashboard.
 2. Open using Microsoft Excel (2016 or later).
 3. Use slicers to filter data by Product Category and Product Name.
 4. Analyze KPIs and interactive charts.
-

Future Enhancements

- Power BI Dashboard
 - SQL Database Integration
 - Power Query Automation
 - Sales Forecasting
 - Customer Churn Analysis
 - Inventory Analytics
-
